STEAM ENGINE (ASSEMBLED)

Vertical oscillating cylinder with electric heater - great for use with A/C generator.

Size 9x9x9" high, weight 6 lbs.

JEN70 MSRP \$279.99..... **\$189.00**

A/C GENERATOR (ASSEMBLED)

Produce your own electricity with this A/C generator. Includes brass light post, bulb and drive belt. Use with #70 steam engine only.

JEN15 MSRP \$159.99..... **\$99.00**

STEAM ENGINE KIT

Your students can learn about the components of an operating live STEAM engine. This kit assembles easily in about 2 hours.

Features include:

Single oscillating cylinder, 3" diameter flywheel, Heavy duty seamless brass boiler, COOL TOUCH handles, Auto release 15psi safety valve, firebox, brick embossed smoke stack. **Order dry fuel tablets to the right.**

Size 7 x 7 x 8" high

JEN76 MSRP \$194.99..... **\$129.95**

DRY FUEL TABLETS (ESBIT)

This is the fuel for all the steam engines on this page. Each box produces about one hour of "run" time.

AIR + WATER POWER

Build your own models powered by air and water pressure to learn about the laws of physics. This unique kit allows you to build two different air-and-water-powered systems: water-jet propelled cars and hydro-pneumo (which simply means air pressure and water pressure) powered engines. The hydro-pneumo system uses a self-contained air-and-water turbine system as a motor.

Construct 15 models including a truck, excavator, radar car, tank, antique car, helicopter, motorbike, backhoe, rocket car, forklift, roadster, propeller plane, grinder, and cutting machine. The water-jet propelled cars are a fun outdoor activity, while the self-contained hydro-pneumo powered models are fun both indoors and out. Compete with your friends to see whose water-jet propelled car and hydro-pneumo car goes the fastest!

The 48-page color instruction book included in this kit illustrates the step-by-step assembly of each model and related principles so that children learn through playing. The building pieces included in this set are compatible with those in all Thames & Kosmos Construction Series kits, Physics Series kits, Wind Power, and Hydropower kits. - Requires 4 - AA alkaline batteries. Ages 8+

REMOTE-CONTROL MACHINES CUSTOM CARS

Automotive engineering hits the fast-track with this kit that allows you to construct ten different remote-controlled cars. Build a fast race car that can speed across smooth floors and drive around the room using a precision steering mechanism. Reconfigure the parts to build other vehicles, such as an off-road buggy that is optimized for power over speed, giving it the torque to overcome rougher terrains. You can quickly shift gears from low speed and high torque to high speed and low torque by popping open the innovative gearbox housed in an easily accessible central powertrain unit, which also contains the IR receiver, one of the motor units, and the battery box. The gear train, or transmission, inside the gearbox has four gears that can be easily reoriented to change the gear ratio, optimizing speed or torque. Build ten realistic models of different cars including a high-speed race car, off-road buggy, go-cart, pickup truck, SUV, dragster, hot hatch, semi-trailer truck, super car, and hot rod. Cool looking auto body plates give your models a realistic appearance, and decals allow you to customize your cars. The IR remote control unit lets you drive the cars forward and backward, and steer the cars left and right. Learn about the various components of real cars, such as wheels, transmissions, engines, axles, chassis, electrical systems, brakes, and suspensions. Explore the physics of speed, acceleration, energy, and aerodynamics. An 80-page, full-color manual guides you through model building with step-by-step illustrated instructions. 2016 Parents' Choice Awards Gold
